## Transilvania University of Braşov, Romania Study program: Engineering and Management in Food and Agritourism

Faculty: Food and Tourism
Study period: 4 years (bachelor)

| Course title           | Code | Language       | No. of  | o. of Number of hours per week |         |            |         |

Course description (Syllabus): data processing, automation, machine learning, intelligent systems, and digital platforms, highlighting their impact on organizational efficiency and decision-making. Students gain practical understanding of AI tools, digital workflows, and emerging technologies, while examining ethical, social, and economic implications of digital innovation. The course provides a solid foundation for applying digital and AI solutions within modern professional environments, with an emphasis on adaptability, critical thinking, and responsible use of technology.

Course description (Syllabus): offers students hands-on experience in applying fundamental concepts of rural tourism, agricultural management, and hospitality services within real-world settings. Through field activities carried out in farms, agrotourism guesthouses, and local production units, students learn to integrate agricultural practices with tourism-oriented services, develop visitor experiences, and manage daily operations specific to rural enterprises. The course emphasizes practical skills such as customer interaction, organization of farm-based activities, product promotion, and sustainable resource use.

**Course description (Syllabus):** explores the creative, innovative, and adaptive capacities that shape rural communities and their development. It examines traditional knowledge, local craftsmanship, sustainable practices, and community-based solutions that contribute to the resilience and identity of rural areas. Through case studies, field observations, and applied projects, students learn how rural ingenuity can support entrepreneurship, agrotourism, cultural preservation, and sustainable resource management.

Course description (Syllabus): essential skills and tools needed to create, edit, and interpret digital visual materials using specialized software. It introduces fundamental concepts of graphic representation, vector and raster design, 2D and 3D modeling, and technical drawing. Students learn how to apply computer-aided design (CAD) techniques to produce accurate schematics, layouts, and visual prototypes relevant to engineering, product design, and visual communication.

Course description (Syllabus): introduces students to the fundamental principles, concepts, and methods used to record, analyze, and interpret financial transactions within an organization. It covers essential topics such as the accounting cycle, double-entry bookkeeping, financial statements, assets and liabilities management, cost classification, and budgeting. Students learn how to prepare and evaluate balance sheets, income statements, and

cash flow reports, gaining a solid understanding of how financial information supports decision-making and organizational planning.

Course description (Syllabus): provides students with a comprehensive introduction to forest ecosystems, sustainable forest management, and the utilization of wood and non-wood resources. It explores the structure, dynamics, and biodiversity of forests, as well as the ecological principles that guide responsible harvesting and conservation. Students learn about the classification, processing, and properties of forest products—ranging from timber and biomass to resins, fruits, and medicinal plants—and their role in various industries. Emphasis is placed on sustainability, resource efficiency, and the economic importance of forest-based value chains.

| Work placement II | PR2  | Romanian       | 4       | -      | -          | 90 hours    | -       |

Course description (Syllabus): offers students practical, hands-on experience in the operational environment of a professional restaurant. During the placement, students engage in essential activities such as food preparation, service techniques, workflow organization, customer interaction, and application of hygiene and safety standards. They observe and participate in the daily routines of restaurant staff, gaining insight into teamwork, communication, and problem-solving in real service situations. The course emphasizes the development of professional behavior, technical serving skills, and the ability to adapt to different service styles and restaurant concepts.

Course description (Syllabus): examines the structures, processes, and resources required to ensure the efficient functioning of tourism services and destinations. It covers key logistical components such as transportation networks, accommodation management, supply chain coordination, visitor flow management, and the integration of technology in tourism operations. Students learn how to analyze and optimize service delivery, improve operational efficiency, and enhance the overall tourist experience. Emphasis is placed on planning, coordination, sustainability, and problem-solving within complex tourism systems. Through case studies and applied activities, the course equips students with the skills necessary to manage logistical challenges and support the effective development of tourism enterprises and destinations.

Course description (Syllabus): is a specialized course designed to equip students with the essential knowledge required for the planning, design, management, and sustainable conversion of farm structures for agritourism purposes. The curriculum explores key topics including the principles of adaptive reuse of traditional agricultural buildings (such as barns and stables) into functional spaces like guest accommodation, commercial kitchens, tasting rooms, and event venues. A strong emphasis is placed on sustainable building practices, energy efficiency, compliance with relevant building codes and safety regulations (including accessibility standards), and maintaining the architectural integrity of the rural landscape. Students will analyze practical case studies to understand the balance between operational functionality, visitor experience, and economic viability in developing high-quality agritourism infrastructure.

Course description (Syllabus): This course provides an in-depth exploration of the European Union (EU), focusing on its institutions, decision-making processes, and key terminologies. Students will gain a comprehensive understanding of the structure and functions of EU bodies such as the European Parliament, the European Commission, and the Council of the EU. The course will cover the mechanisms through which EU policies are formulated, negotiated, and implemented, with particular emphasis on their impact on public food service management and agrotourism industries. Key topics include the internal market, agricultural policies, sustainable development, and regional cooperation. Students will also explore the legal and economic frameworks that guide EU operations, while becoming familiar with the terminology essential for navigating EU documents and communication. This course is tailored for students in Public Food Services and Agrotourism Management, preparing them to analyze EU regulations and their relevance to the sector.

Course description (Syllabus): This course is designed to provide students with the essential knowledge and practical skills needed to manage and optimize the installations and equipment used in the hospitality industry, particularly in hotels and restaurants. It covers a wide range of topics, including the selection, installation, and maintenance of key systems such as kitchen appliances, refrigeration units, heating, ventilation, and air conditioning (HVAC), as well as lighting and safety systems. Students will explore the principles of energy efficiency, sustainability, and ergonomics in designing and operating these installations. The course also addresses regulatory standards, safety protocols, and technological advancements in hospitality equipment, ensuring that students are equipped to make informed decisions about purchasing, maintaining, and upgrading hotel and restaurant facilities. Through case studies and practical exercises, students will gain a thorough understanding of how these installations contribute to the overall guest experience and operational efficiency.

Course description (Syllabus): This course introduces students to the fundamental principles, methods, and tools of quality management, with a focus on their application in the hospitality, food service, and agrotourism sectors. Students will explore key concepts such as quality planning, quality assurance, quality control, and continuous improvement, while examining internationally recognized standards and frameworks, including ISO certifications and HACCP systems. The course emphasizes the role of quality in enhancing customer satisfaction, optimizing operational processes, and ensuring safety and sustainability. Through practical examples, case studies, and analytical exercises, students will learn how to design and implement effective quality management systems, evaluate performance indicators, and apply problem-solving techniques to improve service delivery. This discipline prepares future professionals to maintain high-quality standards and drive organizational excellence in dynamic and competitive environments.

Course description (Syllabus): This course offers a comprehensive introduction to the principles and practices of production management, with a focus on their application in the food service, hospitality, and agrotourism industries. Students will examine the strategies and techniques used to plan, organize, and control production processes, including capacity planning, workflow design, inventory management, scheduling, and resource optimization. The course also explores modern approaches such as lean production, just-in-time systems, and sustainable production methods. Emphasis is placed on ensuring efficiency, cost-effectiveness, and consistent product quality while meeting customer demands. Through case studies, practical assignments, and analytical tools, students will learn how to evaluate production systems, identify operational challenges, and implement improvements. This course equips future professionals with the skills needed to manage production activities effectively in dynamic and competitive organizational environments.

Course description (Syllabus): This course provides a comprehensive overview of the engineering principles, technological processes, and management considerations involved in the production of beer. Students will learn the science behind brewing, from raw material selection and processing to fermentation, filtration, and quality control. A strong emphasis will be placed on process optimization, equipment design, and sustainability within the context of both industrial and craft brewing. Furthermore, the course will connect brewing technology to the agritourism and food service sectors, preparing students to manage microbreweries, integrate brewing experiences into tourism, and ensure high-quality product delivery in public food service.

| Course title        | Code | Language       | No. of  | Number of hours per week |         |            |         |  |

**Course description (Syllabus):** This course is designed to provide students with the practical skills, operational knowledge, and managerial strategies essential for planning, organizing, and executing successful catering operations. It covers the entire catering process, from initial client consultation and menu development to logistics, presentation, service, and post-event analysis. Special attention is given to the unique demands of various event types (corporate,

weddings, conferences, agritourism events) and the integration of engineering and management principles to ensure efficient, profitable, and high-quality service in the public food sector.

|  | Course title                   | Code | Language       | No. of  | Number of hours per week |         |            |             |

Course description (Syllabus): This mandatory preparatory course guides final-year students through the entire process of planning, researching, writing, and presenting their Bachelor of Science (BSc) Thesis. The course focuses on transforming an initial idea into a structured, academically rigorous final document relevant to the field of Public Food Service and Agritourism. Key emphasis is placed on defining clear research objectives, selecting appropriate methodologies (technical, managerial, or analytical), conducting critical literature reviews, adhering to academic writing standards, and preparing effectively for the final thesis defense. The goal is to equip students with the necessary skills to produce an original and high-quality scientific contribution.

| Course title                                | Codo | Language       | No. of  | Number of hours per week |         |            |         |

Course description (Syllabus): This course introduces students to the principles and techniques of building and utilizing mathematical, statistical, and computational models to understand, analyze, and forecast various aspects of the tourism sector. Students will learn how to quantify tourist behavior, simulate demand fluctuations, optimize resource allocation (e.g., accommodation, staff), and evaluate the economic and environmental impacts of tourism policies. A strong focus will be placed on applying these models to the specific challenges and opportunities within the Agritourism and Public Food Service context, enabling data-driven decision-making for sustainable management and engineering solutions.

| Course title                      | Code | Language       | No. of  | Number of hours per week |         |            |         |  |

Course description (Syllabus): This course introduces students to the fundamental principles of psychology and human behavior, with a specific focus on their applications within the service industry, management, and consumer decision—making in the context of Public Food Service and Agritourism. Students will explore how individual and group behaviors are influenced by cognitive, emotional, and social factors. The curriculum emphasizes understanding consumer motivation, perception, learning, and attitude formation to effectively design service experiences, manage teams, and optimize marketing strategies. The goal is to provide managerial engineers with the soft skills and analytical frameworks needed to understand and proactively influence stakeholder behavior.

Course description (Syllabus): This interdisciplinary course examines the theoretical and practical dimensions of volunteerism, focusing on its role in social responsibility, non-profit sector management, and community development within the hospitality and rural development context. Students will analyze the psychology and motivation behind volunteering, learn best practices for managing and retaining volunteers, and evaluate the measurable impact of volunteer projects on organizations, communities, and agritourism initiatives. A significant practical component requires students to engage in structured volunteer work to apply theoretical concepts and develop essential soft skills like teamwork and leadership.
